Bevezetés

A növények speciális metabolizmusuk, másodlagos anyagcseréjük során számos vegyületet, vegyületcsoportot tartalmaznak. Bizonyos komponensek gyógyászati jelentősége tudományos (pl. mikrobiológiai, farmakológiai) bizonyítást nyert, így ezeket a vegyületeket **hatóanyagoknak** nevezzük. Egy-egy növénycsalád, nemzetseg vagy gyógynövényfaj sajátos, egyedi hatóanyagspektrumot mutathat, így jelenlétük **kemotaxonómiai szereppel** bír.

Gyógyászati alkalmazásuk mellett jelentős feladatot látnak el többek között a növények ellenállóképességének fokozásában (stresszfaktorok), az egyes taxonok környezeti tényezőkhöz való adaptációjában, de felelősek lehetnek az egyes növényi részek (pl. virág, termés, mag) színéért, illatáért, így a megporzásért is.

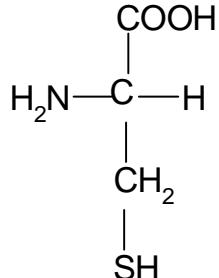

Jelen összeállításunk közel sem teljes, válogatást nyújt a gyógynövények széles hatóanyagspektrumából, mely a Pécsi Tudományegyetem Gyógyszerésztszakon oktatott **Farmakobotanika** és **Farmakognózia** tantárgyainak kötelező és felismerendő, összesen **325 növényi vegyületének** szerkezeti képleteire támaszkodik. A komponenseket a tanult **145 növényi drog** szerinti csoportosításban mutatjuk be, kiemelve a drogok fő hatóanyagait. A kiadvány végén található **hatóanyagok és drogok szerinti névmutatók** betűrendben segítik a gyors keresést és eligazodást, kiegészítve függelékként a drogok **anyanövényeivel**.

Reméljük, hogy jegyzetünk segítséget nyújt a gyógyszerészhallgatók növénykémiai ismereteihez, a tájékozódáshoz, a számonkérésekre és vizsgákra való felkészüléshez. Kívánjuk, hogy forgassák haszonnal összeállításunkat.
